OPENCOURSE · TEST DOCUMENT

The OpenCourse example document

A small PDF for development servers. It has a few pages, an outline, a table, a figure and some words you can search for, so the document catalog and the reader have something real to show.

Every development server publishes this file when it starts with `npm run dev`, next to the example course. It is not meant to teach anything: each chapter exists to exercise one part of reading a PDF.

1. Reading pages
2. The outline
3. Searching the text
4. Tables and figures
5. A longer chapter
6. Text beyond ASCII

> The searchable phrase for this page is **quiet harbour**. Search for it and the result should point at page 1.

CHAPTER 1

Reading pages

A PDF is read a page at a time. Each page is drawn at the width of the reading column, so narrowing the window should make the page smaller rather than make the page scroll sideways.

Marking a page as read records how far you have got. Reload the reader and the progress should still be there; the percentage counts pages, not words, so this short chapter is worth as much as the long one later on.

The searchable phrase for this chapter is **copper kettle**.

CHAPTER 2

The outline

The headings of this document were turned into PDF bookmarks when it was printed. A reader that shows an outline should list the six chapters, and choosing one should open its page.

A sub-section

Bookmarks can nest. This heading is one level below its chapter, so an outline that understands nesting will show it indented under “The outline”.

Another sub-section

And a second one, so the nesting is not a coincidence of a single child.

The searchable phrase for this chapter is **lantern festival**.

CHAPTER 3

Searching the text

The server extracts the text of every page once, after the document is published, and a search looks through that text. Each chapter of this document has one phrase that appears nowhere else:

Phrase	Where it is
quiet harbour	The title page
copper kettle	Chapter 1
lantern festival	Chapter 2
granite staircase	Chapter 4
tidal observatory	Chapter 5
Übergrößenträger	Chapter 6

The table above repeats every phrase, so searching for one should find two pages: this one and the page it belongs to. A search for a word that is in no chapter, such as *xylophone*, should find only this page.

CHAPTER 4

Tables and figures

Tables and drawings are where a renderer is most likely to lose something. The table has right-aligned numbers and the figure is vector art, so both should stay sharp at any zoom.

Month	Pages read	Sessions	Minutes
January	42	9	310
February	57	12	402
March	38	8	265
April	71	15	498

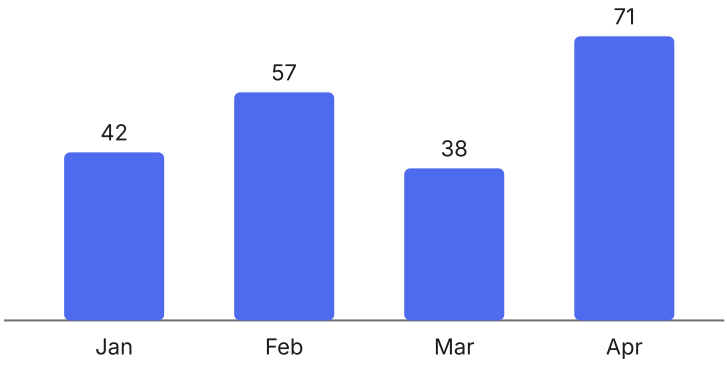

Figure 1. Pages read per month, from the table above.

The searchable phrase for this chapter is **granite staircase**.

CHAPTER 5

A longer chapter

This chapter runs over more than one page, so a section in the outline covers a range of pages rather than one, and reading it through means marking more than a single page.

Spaced repetition rests on a simple observation: something recalled just before it would have been forgotten is remembered for longer than something recalled while it is still fresh. Each successful recall can therefore wait a little longer than the last, and a learner who reviews at those widening intervals spends their time on what is about to slip rather than on what they already know.

Retrieval practice makes a related point. Reading a passage again feels productive, because the text becomes familiar, but familiarity is not recall. Closing the book and trying to state what it said is harder, and the difficulty is the part that does the work. A quiz at the end of a lesson is retrieval practice in its plainest form.

Interleaving mixes kinds of problems within one session instead of practising one kind at a time. It is slower while it happens and produces better results later, because the learner has to decide which method a problem needs before applying it, and that decision is exactly what a block of identical problems never asks for.

Elaboration asks why and how: why does this step follow from the last, how does this idea connect to one already known. Explanations that a learner builds for themselves tie new material to old, and material tied to more things is found again by more routes.

Concrete examples give an abstract idea something to hold. Two or three examples that differ on the surface but share the idea underneath work better than one, because they show which features matter and which are incidental.

Dual coding pairs words with pictures — a diagram beside a description, a timeline beside a narrative. The two are remembered by different means, and either one can bring back the other.

None of these techniques is new, and none needs software. What software can do is remember the schedule, keep the questions, and notice which pages were read and which were skipped, so that the learner's attention goes on the material rather than on the bookkeeping.

The rest of this chapter is filler, there to push it onto a second page. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Integer posuere erat a ante venenatis dapibus posuere velit aliquet. The searchable phrase for this chapter is **tidal observatory**, and it sits at the very end so that finding it proves the second page was indexed.

CHAPTER 6

Text beyond ASCII

Text extraction has to survive more than English. Each line below should come back from a search exactly as written:

- French: les élèves révisent leurs leçons à l’école.
- German: Der Übergrößenträger trägt große Lasten.
- Czech: Příliš žluťoučký kůň úpěl ďábelské ódy.
- Greek: Η γνώση είναι δύναμη.
- Punctuation: “curly quotes”, an en dash – and an em dash —, and an ellipsis…

The searchable word for this chapter is **Übergrößenträger**.

That is the end of the example document.
